

Netflix Content Analytics Dashboard | Power BI |

Data Visualization | Business Intelligence

Project Overview:

This project focuses on analyzing Netflix titles data using Microsoft Power BI. The dashboard provides insights into Movies, TV shows, ratings, release, trends, listed and country-wise distribution. The objective is to transform raw entertainment data into interactive visualizations for business intelligence and decision-making.

Problem Statement:

Netflix contains thousands of movies and TV shows from multiple countries and categories. Understanding trends in ratings, release years, listed in, and countries manually is difficult. This project aims to Identify rating patterns, content types, and country-wise availability of titles.

Tools & Technologies:

- Microsoft Power BI
- Power Query
- DAX (Data Analysis Expressions)
- Data Modelling
- Data Cleaning & Transformation
- Data Visualization
- Business Intelligence Reporting

Dataset Information:

The dataset contains information about Netflix titles including:

- Type
- Title
- Director
- Cast
- Country
- Date Added
- Release year
- Rating
- Duration
- listed_in

Data Cleaning:

Data cleaning was performed before visualization:

- Removed duplicate records
- Handled missing/null values
- Standardized country names and ratings
- Converted date fields into proper date format
- Created calculated columns and DAX measures
- Filtered unnecessary records

Measures:

Measures created:

- 1.Count total movies and total TV shows.
- 2.top contributing countries.
- 3.Analyze rating distributions.
- 4.Identify yearly content growth.
- 5.most common listed in.

Dashboard Screenshots Description:

The Power BI dashboard includes:

- Rating Analysis Dashboard
- Country Analysis Dashboard
- KPI Cards for Total Title, Movies, TV Shows, and countries
- Line Charts for ratings and listed_in
- Pie charts for content distribution
- Slicers for filtering by date and country

Key Insights:

Key insights identified from the dashboard:

- Identified that Movies contribute the majority of Netflix content.
- Discovered TV-MA and TV-14 as dominant audience rating categories.
- Detected rapid content expansion after 2015 with peak growth during 2018–2020.
- Recognized the United States as the highest content contributor.
- Highlighted Drama and Documentary as high-performing categories.

Recommendations:

Recommendations based on analysis:

- Increase production in high-demand listed_in.
- Focus on international content expansion.
- Improve family-friendly content offerings.
- Continue investing in trending categories.
- Use audience rating trends for content strategy.

Business Impact:

This dashboard helps organizations and analysts:

- Identify the most popular content categories and listed_in.
- Understand audience preferences and viewing trends.
- Track content growth and performance over time.
- Improve content planning based on ratings and popularity.
- Discover high-performing content to increase user engagement.
- Analyse trends across countries and release years.

Conclusion:

The Netflix dashboard project successfully transform raw data into meaningful visual insights using Microsoft Power BI. The project demonstrates practical knowledge of data cleaning, data modelling, DAX calculations, visualization techniques, and business intelligence reporting.
